Late rise of the train loss (seed 2, n=100, m=1000, λ=0.0001, ν²=1, η=1)
train loss L_n (unregularised, with ½)
ridge solution train loss = 5.62e-08
minimum at t≈2e+03
GD steps
test loss L
ridge solution test loss = 8.84e-04
GD steps
$\|\theta(t)\|^2$
$\|\theta_{ridge}\|^2$
$\|\theta_{min-norm}\|^2$ (interpolant)
GD steps
late rise: $L_n(t)/\min_{s\le t} L_n(s) - 1$
GD steps
